Step 5 - No DNS Servers. If you don't have any DNS servers configured then you'll be able to communicate on the network with IP addresses only. You should be able to ping your default gateway, your DHCP server, and other servers on the network. However, you won't be able to do any of that by name. Options to solve this problem:

SQL Performance troubleshooting guide: A walk through ...

Before you dive into in-depth troubleshooting, there are a few things that you should check first. They are: DNS Configuration - can you resolve the name of the federation service? This should resolve to either the load balancer's IP address or the IP address of one of the AD FS servers in your farm. For more information see AD FS Troubleshooting - DNS.

Troubleshooting AD FS | Microsoft Docs

If not, press the Stop button to abort the lookup, then edit the server names, ports and IMAP/POP and click Re-test again. (Alternatively, you can allow the lookup to gather default account details and then manually change the settings later.) Configure the outgoing server. Multiple email accounts can use the same outgoing SMTP server.
